

## Specifications:

### Healthiest dining utensils, absolutely free from any material harmful to human health and the environment

In the body and glaze of some non-standard tableware, lead oxide is used to create more radiance, which is harmful to human health. However despite having a very shiny and transparent glaze, our products are absolutely free from lead, cadmium or any other harmful substance for human health.

The accuracy of this claim is continuously measured and controlled according to the international standard ISO 4531-1 by sampling and special testing method that is so-called “atomic absorption spectrum” (AAS).

### Impact-resistant body and edge

The body of our products are very strong due to the use of the best and purest raw materials as well as firing in huge tunnel kilns at 1400 ° C and that is why they are called “hard porcelain”. The edge and body of the parts are tested for impact measurement to ensure their sufficient strength in dealing with hard objects according to the the international standard BSEN 12980.

### Fully guaranteed for washing in industrial dishwashers

Although nowadays many products are sold with the claim of dishwasher washability in the market, the title “Dishwasher safe” is only applicable to IGD-decorated products.

We are the only manufacturer in the region and of the few manufacturers in the world using IGD(In-glaze Decoration) technology for decorating 100% dishwasher safe products.

### Possibility of printing custom logos and designs with in-glaze decoration technology

By inserting the logo of your hotel, restaurant or organization, you would let your guests get acquainted with your brand and special style of hospitality while enjoying your reception. By employing in-glaze decoration technology, not only we make your brand last on the products but also in the minds of your customers. At present, a vast majority of 4 and 5 star hotels all around the world, as well as a large number of the most prestigious restaurants, high rank organizations, banks and important public and private institutions such as airlines enjoy inserting their exclusive logo on the porcelain table ware they use for reception.

### Excellent resistance of the glaze against scratches

We constantly measure the hardness of the glaze of our products based on the international standard of EN 101.

Our glaze with a hardness of 5.5 Mohs is one of the hardest glazes of its kind. This very glossy, clear and hard glaze is one of the distinguishing features of Our products from other products in the market.

### Whiteness and translucency

One of the features of quality porcelain dishes is their whiteness and translucency. Both parameters are measured and controlled by special equipment in our laboratory.

It is worth mentioning that our Porcelain by introducing the body called "FDC" (patent number 88626) having whiteness of 091% , glaze hardness of 5.5 Mohs and the highest translucency holds the record of all these three parameters in the world porcelain industry.

### Easy stacking

In designing our hotel items, the culture of consumption is considered and parallel with special notice to elegance, beauty and ergonomics, the highest functionality is taken into consideration.

In addition, the clever design of the parts and their stackability, has made it possible to occupy the least space during storage and provide a quick and easy service.

### Inglaze Decoration

### What is In-Glaze Decoration?

Studies show that due to the firing temperature of 1400 ° C and polished and accessible surface providing easy washing, hard porcelain dishes are the most suitable dining utensils. And among these, porcelain dishes decorated with in-glaze technology are the best option.

In the in-glaze decoration method, which is used by just a small number of porcelain manufacturers in the world, dishes decorated with special in-glaze paints are fired at a temperature of 1200 degrees. (Instead of firing at the usual temperature of 900 degrees).

So the patterns on the porcelain sinks in the heat melted glaze and after coming out of the kiln, the glossy glaze covers the pattern as a hard transparent coating. Thus the resistance of the design and pattern on the dishes against frequent washing in the dishwashers is considerably increased.

Besides that, the dishes decorated by in-glaze method are healthier due to the lack of food contact with the colors of the designs on the dishes.

### Like a precious jewel

For decorating the products with in-glazed gold designs, a thick layer of 24 carat gold is used so that repeated washing over time does not cause erosion or fading of the motifs.

Using this method gives the golden patterns a matt effect and a unique gold color that is not seen in ordinary gold dishes.

Keep in mind that products adorned with in-glazed gold like

jewelry made of 24-carat gold, may be scratched over time due to the flexibility of gold, which indicates the thickness of gold in the designs which is the nature of this precious metal.

However, while there is no need to worry about the loss of these motifs, like any other precious object, proper maintenance over time preserves its spiritual value.

## Instruction Manual for washing and Maintenance of Hotel products

Dear Consumer

Thank you for choosing our products & congratulation on your taste.

The present product is produced by using the best raw materials

1- Due to the extreme hardness of the glazed dishes, inferior metal pieces such as non-standard cutlery & Kebab skewers are easily corroded by porcelain, so please make sure to use standard cutlery. Also, please avoid dragging Kebab skewers on the edge of the platters;

2- Stack-ability resulting to easier handling and storage of the dishes is an advantage of these products. Nevertheless since the bases of dishes are not glazed due to the technical necessities of production, although they are well polished, hardness of porcelain body can create lines and scratches on the surface of the below dishe or a glass table.

3- Use of bleaching materials is harmful to human health. However if needed, please uses diluted solution in a short

and the most modern porcelain machinery in ceramic & porcelain industries.

In order to maintain the quality & shining of your purchased dishes, please consider the following points:

otherwise, metal particles remain on the surface of dishes, which may blacken its edges (In order to prevent blackening the edge of the platter while separating kebab from the skewer, it is recommended to use a piece of bread between the edge of platter & kebab skewer).

Therefore when bunching and moving the dishes, we recommend you not to place large quantity of the dishes on each other, to avoid scratching the below dishes by too much weight of the ones on the top. Putting a piece of napkin between the plates is a clever choice.

time and avoid direct contact with dishes. We suggest using high-quality dishwashing detergents instead of bleaching agents.

Considering above mentioned points will help to maintain the beauty and quality of the glaze on the dishes and helps long-term use.

You are special and we understand this very well.

By insertion of the exclusive logo of your hotel and restaurant, let your guests get more familiar with your brand name and your hospitably style while enjoying their meal. Enjoying Inglaze decoration technology not only we can engrave your name on the dishes but also on your customer's mind.

At present time, the vast majority of the 4 and 5 star hotels as well as many prestige restaurants, agencies and organizations, banks and important private and governmental institutions such as airlines make use of this advantage.

## Form S

Form S is a very comprehensive family of premium quality hard porcelain tableware made out of one of the hardest, whitest and most translucent hard porcelain materials ever mass produced (named FDC/patent number 88626) which also has superb sustainability characteristics in its nature.

The form of product follows maximum efficiency and ergonomomy.

Form S is exaggeratedly stackable which gives it a superb space efficiency character and at the same time it gives the design a playful nature.

The designer team has tried its best to consider flexibility in professional use due to extremely diversified sizes and cost efficiency.
